Swivl Teams

Swivl Teams is designed to help create a culture of feedback and collaboration within your organization. From the most active schools of education, the largest K12 districts, or the most secure universities, Swivl brings out the best in your Team.

In Swivl Teams, users securely create, share, and comment on fully encrypted videos using custom rubrics based on your own observation framework and Administrators monitor analytics to ensure everyone is on track. In addition, the software brings to life features you love about the Swivl robot: Multi-Microphone audio playback, Multi-Camera viewing, Screencasting, Speech Analysis, and live Bookmarking to name a few.

Administrators	Teachers and Coaches	Teachers and Students
User and video statistics	Collaboration	Basic uploading and editing
User management	Multi-marker bookmarking	Note-taking
Security controls	Screencasting	Commenting with rubrics on Pro Team members' videos
Rubric creation	Commenting with rubrics	

*256-bit encryption standard on all teams
*Localized content storage available for international teams

Building a Team

The **Team Administrator** role is for: instructional coaches, mentor teachers, professors of student teachers, or IT administrators. This person will manage:

User Analytics
Quickly and easily get a snapshot of your Team's performance and recent activity. For more in-depth filtering and sorting, visit the User, Groups, and Labels Statistics section.

Rubrics & User Labels
Easily manage multiple school sites and build custom collaborative experiences by setting up distinct time-stamped commenting rubrics and user labels for each type of user in your organization.

Security
Select the sharing options available to your Team members, create private sharing Groups, and customize your settings to meet your Team's security requirements.

Teachers and Coaches securely share their videos to receive direct, private feedback using time-stamped comments. In addition, each can view speech analysis data to measure student versus teacher talk time. With an easy to use editor they can also produce highlight reels of best practices.

Secure Sharing
Sharing is controlled by the video owner; decide when and with whom to share your videos. Swivl makes it easy to share videos directly from your mobile device via the Swivl app or the Swivl Teams platform.

Easy Collaboration
Videos shared with you are posted in your Recent Activity Dashboard. From here, watch the video, identify where the owner placed bookmarks, and post your own time-stamped comments using custom rubrics.

Culture of Feedback
Collaborating in Swivl Groups is essential for creating a culture of feedback. Groups make it easy to share multiple videos across schools, districts, and schools of education to curate best practice libraries for your organization.

Teachers and Coaches should each have a **Pro Team** member account

Advanced Capabilities

Multi-Microphone speech analysis evaluates the breakdown between teacher and student talk time and **bookmarking** to annotate the video while it records from any marker.

**Screencasting** synchronizes a laptop or desktop screen and presenter's video.

Multi-Camera captures different angles of any room and personalizes recording of students.

Teachers and Students and other viewers start with Standard Team member accounts for self-reflection. These users cannot securely share videos, but can still upload, review, and perform basic editing. In addition they can watch and make comments on videos that are uploaded to Groups of which they are apart.

Standard Team member accounts are free
